J.W. SPEAKER
Engineered. Lighting. Solutions.

MODEL 274

SmartHeat
HEATED LIGHTING TECHNOLOGY

Be Seen From Every Side. J.W. Speaker is your 360° lighting solution. 5 different versions to add SmartHeat® technology to every side of your vehicle or trailer. DOT-compliant for legal on-road use when mounted vertically or horizontally. First-of-its-kind heated front turn or front position and turn lights!

Brighter, Safer. Your brake, turn, and hazard lights are critical visual signals to drivers on the road. Lights clear of snow and ice make your vehicle more visible to drivers, giving everyone a better chance to safely react. Powerful & long-lasting LEDs give you confidence that your lights will be clear and bright.

Upgrade to SmartHeat®. Avoid downtime from snow or ice-covered signal lights that make your truck hard to see when mother nature has a bad day. J.W. Speaker's SmartHeat® technology in each Model 274 automatically heats the lenses when conditions get tough, so you can get home safely.

Built to Survive the Toughest Jobs. Premature light failure won't slow you down. Designed and tested to meet IP69K for protection against water, dust, & high pressure washing. LEDs use less power than traditional bulbs, and are designed to withstand the shock and vibration that comes with your job.

White LED Version:
Reverse Light

Red LED Version:
Stop Tail Turn Light

Amber LED Version:
Rear Turn Signal, Front Position & Front
Turn Signal, or Side Marker Light
