“Zero lives lost in collisions with commercial vehicles and mobile machinery”

Brigade is at the pinnacle of commercial vehicle and mobile plant blind-spot safety. A founder and innovator of sensing and monitoring systems that have helped save lives for over forty years.

While our portfolio may be emulated, our commitment to vehicle safety, our reliable, trusted products and our dedicated team of experts, cannot. We invest in people as well as technology. Everyone in the Brigade family understands the life-changing significance of the products and service we provide and the importance of outstanding systems that work in the most demanding of situations.

For the future: We will continue to inform and work with policy makers and industries to ensure blind-spot mitigation is effective. We will recruit the highest caliber people who are passionate about what we do. We will impart expert knowledge and advice to help customers with their challenges. We will always seek to innovate and bring new products to market that help prevent collisions and save lives. We will strive to achieve our vision of zero lives lost by constantly improving the safe operation of commercial vehicles and mobile plant around the world.

- **Brigade Electronics Group Plc management systems are certified to ISO9001:2015**
- **Our principal manufacturing facilities are certified to IATS16949:2016**
- **All applicable products have CE-marking in Europe and FCC/IC approval in North America**
- **The majority of our products comply with UN ECE Regulation 10 (EMC)**
- **Combinations of our camera monitor systems are certified to Regulation 46**
- **Our products comply with REACH and RoHS**
- **Not all products sold in Canada**

Camera Monitor Systems

Brigade's camera monitor systems enable drivers and operators to maneuver and drive safely.

Vehicle-mounted cameras can help the driver to see blind spots by delivering a live feed on the monitor of everything in the camera view, including people or obstacles.

Camera monitor systems are used in a wide range of on and off-road applications to meet a host of health and safety and legislative requirements. The range includes entry-level reversing cameras to full-vehicle camera system with AI. With single-to-multiple camera inputs and auto-triggers, Brigade cameras and monitors will work on any application in any industry and are fully compatible with MDR recorders.

Internet Protocol (IP) Cameras are high-definition digital cameras with their own IP address. Directly connected to an MDR, the IP camera transmits digital video over a data connection (ethernet cable) where the images are saved to the onboard storage.

Backeye@360 is an intelligent camera monitor system designed to assist low-speed maneuvering by providing the driver with a complete 'birds-eye' surround view of the vehicle in real-time.

AI Cameras are a new generation of active blind-spot detection.

Brigade

360° Camera Monitor Systems

An intelligent camera monitor system designed to assist low-speed maneuvering by providing the driver with a complete ‘bird’s-eye’ surround view of the vehicle in real-time.

360° technology works with four ultra wide-angle cameras, each covering one full side of the vehicle with a viewing angle of over 180°. High-mounted on the front, rear and sides, the calibrated cameras capture all of the surrounding area including the blind spots of the vehicle or machine.

The four live images are simultaneously sent to an electronic control unit (ECU) where they are instantly processed, combined, blended and stitched. A clear, real-time view is provided to the driver in a single image on the monitor.

360° with Artificial Intelligence

- Recognizes and alerts the driver to people around the vehicle
- Detected people are shown in a colored box overlayed on the 360° image on the driver’s monitor
- Compatible with all Brigade HD monitors and MDR recorders

Camera Monitor System Ranges

AI	AI cameras are a new generation of active blind-spot detection. Using Artificial Intelligence, the cameras detect and recognize the human form within the pre-defined detection zone and reliably warn the driver visually and/ or audibly before a possible collision occurs.
ELITE	Top-of-the-range systems that are the first choice for Original Equipment Manufacturers (OEMs) and Bodybuilders. Exceptional quality and consistent performance in the harshest conditions. Rigorously tested to higher standards, the superior components and build quality are reflected in the Elite series' 5 year warranty. Ideal for heavy-duty applications including N2 and N3 Heavy Goods Vehicles (HGVs), on/off-highway vehicles, agricultural machinery and mobile plants used on Construction, Civil Engineering, Quarry and Mine sites.
SELECT	High-quality, reliable, best-selling mid-range systems. First choice in the Aftermarket and popular also with OEMs and Bodybuilders. 3 year warranty. Ideal for medium to large on-highway vehicles and smaller off-highway mobile plants.
ESSENTIAL	Entry-level reversing solution for cost-conscious Aftermarket customers. Ideally suited for on-highway applications.

What are IP cameras & Expansion Modules?

An Internet Protocol (IP) camera is a high-definition digital camera with its own IP address. Instead of transmitting video over a video cable to a monitor or Mobile Digital Recorder (MDR), the IP camera transmits digital video to an MDR over a data connection (ethernet cable) where the images are saved to the onboard storage.

Brigade Expansion Modules use Power Over Network (PON) Switch technology to expand the channel capability of the MDR by transmitting digital video images from up to 8 IP cameras over a single ethernet connection to the MDR. The MDR on-screen display allows easy camera set up without need for specific IP camera knowledge

Benefit: Connecting IP cameras increases the number of channels available on the MDR:

MDR-641	- 4 x Analogue channels plus 1 x IP channel	= 5 channels
MDR-508	- 8 x Analogue channels plus 1 x IP channel	= 9 channels
MDR-644	- 4 x Analogue channels plus 4 x IP channels	= 8 channels
MDR-644 and 4 x PON switch	- 4 x Analogue channels plus 8 x IP channels	= 12 channels
MDR-508 and 4 x PON switch	- 8 x Analogue channels plus 4 x IP channels	= 12 channels
MDR-508 and 8 x PON switch	- 8 x Analogue channels plus 8 x IP channels	= 16 channels

WARNING: There is a latency (time lag) in all digital video transmission, including IP Cameras. Although this time lag is small (~800ms IP1100C ~250ms IP1000C & IP1200C), it is unacceptable for a camera that a driver is using as a safety and maneuvering aid. Brigade IP cameras are an excellent choice for general monitoring (eg bus interior, doors, luggage compartment) and recording purposes, but should not be used as a driver aid for maneuvering or blind-spot monitoring. Analogue cameras are still the best choice for safety critical maneuvering and blind spot monitoring applications.

Mobile Digital Recording

Brigade's Mobile Digital Recording (MDR) systems are capable of capturing vehicle data and footage from up to 16 vehicle-mounted cameras.

The MDR range includes models with 4G connectivity capabilities, allowing data to be accessed from the recorder without having to physically go to the vehicle.

MDRs are compatible with all Brigade's Backeye® camera monitor systems, IP cameras and Backeye@360.

Dash Cams - compact, combined camera and recording systems that provide evidence in the case of vehicle incidents. The palm-sized devices are easily attached to the windshield, enabling recording of the road ahead and in cab.

 - Bracket and Fixings

Features

 - Remotely access MDR units using wireless (WiFi models only) and/or Mobile network (4G models only)
 - Mobile apps for remote view (WiFi/4G models only)
 - Geo-fencing (WiFi/4G models only)
 - Mobile Standards: 3G/4G
 - Audio (cameras must have microphones)
 - Robust housing
 - GPS
 - Internal G-sensor
 - Recordings saved to hard disk or SSD (watermark protected)
 - Recording modes: normal, alarm and timer (all watermarked)
 - Configurable alarm trigger settings (speed, G-force, motion detection, video loss, voltage)
 - Record images prior to alarm activation and after vehicle switched off
 - MDR-Dashboard (full player) and MDR-Player (portable) with Google (English only)
 - Search by date, time or triggered events

Image and Audio Quality

 - High quality H.265 image compression
 - ADPCM - audio compression
 - Choice of 8 low to high resolution settings
 - Record at between 1 and 25 frames per second, per channel

Power

 - Max power consumption: 22 Watts
 - Current: 3.9 Amps

Durability & Standards

 - Mechanical vibration: SSD 3.1G CMR 1.5G
 - Mechanical shock: 51G
 - Operating temperature: CMR -40 to +50°C / -40 to +122°F SSD -40 to +70°C / -40 to +158°F
 - CE marked
 - FCC approved
 - E Mark
 - IC approved

Multi-level password protected access

 - 8 x trigger Inputs, 2x trigger outputs and 1x power output
 - Built-in HDD heater
 - MDR Control using USB Mouse
 - USB 3.0 connection
 - TV System: PAL/NTSC/AHD
 - Compatible with Brigade's vehicle CCTV camera monitor systems, IP cameras and Backeye@360 systems

OPTIONAL EXTRA		
Expand the channel capability of the MDR with the addition of an Expansion Module and IP cameras:		
IP-EM4 - Expansion Module adds 4 channels to MDR-508 = 12 channels	5860	
IP-EM8 - Expansion Module adds 8 channels to MDR-508 = 16 channels	5861	
IP-1XXX-PC - IP Camera - Power & Ethernet Cable	5985	

What are IP cameras & Expansion Modules?

An Internet Protocol (IP) camera is a high-definition digital camera with its own IP address. Instead of transmitting video over a video cable to a monitor or MDR, the IP camera transmits digital video to the MDR over a data connection (ethernet cable) where the images are saved to the onboard storage.

See pages 16-17 for the range of IP cameras

Brigade Expansion Modules use Power Over Network (PON) Switch technology to expand the channel capability of the MDR by transmitting digital video images from up to 8 IP cameras over a single ethernet cable to the MDR. The MDR on-screen display allows easy camera set-up without the need for specific IP camera knowledge

Benefit: Connecting IP cameras increases the number of channels available on the MDR:		
MDR-641	- 4 x Analogue channels plus 1 x IP channel	= 5 channels
MDR-508	- 8 x Analogue channels plus 1 x IP channel	= 9 channels
MDR-644	- 4 x Analogue channels plus 4 x IP channels	= 8 channels
MDR-644 and 4 x PON switch	- 4 x Analogue channels plus 8 x IP channels	= 12 channels
MDR-508 and 4 x PON switch	- 8 x Analogue channels plus 4 x IP channels	= 12 channels

AI Connected dashcam

The AI Connected Dashcam is a compact, windshield-mounted dual camera system that uses AI technology to provide event warnings, high-definition incident recording and monitor driver behavior.

The forward-facing camera will identify and audibly alert a driver to a hazardous situation, such as a risk of colliding with the vehicle ahead or an unsignalled lane departure.

The driver-facing camera will identify issues such as mobile use, smoking and inattention.

- 1920P forward facing and 1080P driver facing cameras for clearer identification of registrations, faces and incident detail
- Supports up to 1TB storage capacity (256GB supplied)
- Built-in 4G allows operators to monitor fleets on the move (Subscription required) via a Dashboard or mobile app, and to remotely live stream or download recorded footage
- Simple installation and calibration
- Enhanced G sensor detects harsh braking, cornering and acceleration events
- Event notifications sent to the dashboard or app to alert fleet managers to high risk incidents

Integration with GEOTAB®

Enhance your fleet management capabilities with our cutting-edge software integration for Geotab. Designed to provide a seamless user experience, this integration brings powerful features and real-time insights directly to your Geotab platform, empowering you to optimize operations, improve safety, and reduce costs.

Key Features

Driver Analysis: Monitors distracted driving behaviors like phone use and smoking.

Road Events: Identifies critical road events and provides real-time alerts.

Automated Video Download: Integrates with Geotab to auto-download video clips based on specific driving events like harsh braking and rapid acceleration.

Comprehensive Event Logging: Logs detailed driving events with corresponding video footage for thorough review.

User-Friendly Interface: Intuitive dashboard with event list, video player, and filters for easy access and analysis.

Integration with Existing Systems: Seamlessly integrates with Geotab telematics and Brigade Electronics equipment.

Benefits

Enhanced Safety: Improves fleet safety by identifying risky driving behaviors and road conditions, reducing accident likelihood.

Incident Analysis and Resolution: Provides clear video evidence for incident analysis and quick resolution of disputes and claims.

Operational Efficiency: Streamlines access and review of critical video footage, saving time and resources, and integrates data into a single platform.

Driver Behavior Improvement: Encourages safer driving habits through monitoring and feedback, supporting targeted training programs.

Regulatory Compliance: Ensures compliance with safety regulations and facilitates the creation of compliance reports.

Cost Saving: Reduces accident and insurance claim costs and minimizes vehicle downtime through efficient incident resolution.

Multi-Channel Camera Integration

Our telematics platform offers the advanced feature of accessing multi-channel camera feeds from your vehicle, providing comprehensive real-time visual monitoring.

This capability allows you to view and manage footage from multiple cameras installed on your vehicle, ensuring complete coverage of its surroundings. Whether for enhancing security, verifying incidents, or improving driver behavior, this feature delivers critical insights and situational awareness, all accessible from a single, user-friendly interface.

Experience heightened control and visibility over your fleet operations with our multi-channel camera integration.

Seamless Integration: Our software seamlessly integrates with your existing Geotab platform, ensuring a smooth transition and immediate benefits without disruption to your operations. Trust our integration to elevate your fleet management and drive your business forward.

Experience the Future of Fleet Management: Unlock the full potential of your fleet with our advanced software integration for Geotab. Contact us today to learn more and schedule a demonstration.

Object Detection Systems

Object detection systems detect stationary and moving objects, providing in-cab visual and audible warnings, alerting the operator or driver whose attention cannot be focused on all danger areas.

Backsense® heavy-duty radar sensor systems are designed for heavy-duty machines to detect objects in blind spots. Available with fixed and programmable detection ranges.

Ultrasonic detection sensors To minimize both vehicle damage and collisions with pedestrians, cyclists or objects. Perfect for road-going commercial vehicles operating in confined spaces or maneuvering at low speed. An optional external speaking alarm can be added to alert cyclists and pedestrians that the vehicle is turning.

Detection systems with AI are algorithm-based systems that predict if a collision is likely to occur and alert the driver depending on the severity of the calculation.

ZoneSafe® uses Radio Frequency Identification (RFID) technology to create detection zones around vehicles and mobile plants. Vehicle mounted antennas detect RFID tags which can be worn by workers, placed on objects or property, or set up around restricted areas.

Brigade

Radar Predict: Artificial Intelligence blind spot detection

Brigade's Radar Predict is the latest innovation in side-detection safety, specifically designed to protect cyclists from collisions with HGVs. The advanced radar system uses AI technology to detect a potential collision by analyzing data such as speed and direction of both the vehicle and cyclist. By differentiating between static and moving objects, the Radar Predict algorithm alerts the driver only when an impact with a cyclist is likely.

The single dual-radar unit is fitted to the nearside of the truck and gives complete coverage to the side of the vehicle, including the trailer unit. The driver is alerted if a cyclist enters a detection zone and receives a second warning if a collision is predicted.

- 180° Cyclist side detection
- Detection area of 4.5m/14.8' x up to 37m/121'
- Calculates if a collision is likely in the nearside blind spot
- Suitable for Rigid AND articulated vehicles
- Quick and easy installation
- Available for left and right side applications
- Meets Reg151 requirements
- Complies with PSS DVS – Independently tested

Sidescan®Flex

Flexible side detection

Sidescan®Flex is a four-sensor system fitted to the side of a vehicle to detect objects in the nearside blind spot, where cyclists or pedestrians can otherwise go undetected.

An advancement to the standard Sidescan® system, Sidescan®Flex allows the operator to choose from four detection configurations, each with different detection distances and audible and visual alerts (see table).

Sidescan® Flex has an increased maximum detection range of 2.5 meters / 8.2 feet.

Ultrasonic Detection On-Screen Display Module

- Integration of Brigade's ultrasonic obstacle detection systems and Backeye® camera monitor systems
- Ultrasonic detection warnings overlaid onto camera image on in-cab monitor
- Reduced driver stress and distractions as all information is in one view

Sensor data and camera image combined

Brigade's ultrasonic proximity sensors minimize both vehicle damage and collisions with pedestrians, cyclists, or objects. Perfect for road-going commercial vehicles operating in confined spaces or maneuvering at low speed.

Working in conjunction with a Backeye® camera monitor system and up to two ultrasonic detection systems, the on-screen display module warns the driver of obstacles close to the vehicle by overlaying 3-stage audible and visual ultrasonic data onto the camera image on the monitor.

Backsense® CAN Radar

For OEM and specialist application markets, Brigade’s Network Radar allows you to connect and link up to 8 sensors to cover large, sometimes complex blind spot zones around a vehicle or machine.

The system provides object detection in CAN (Controller Area Network) message format which may be processed to display data on control panels/displays on the vehicle or used to interact with aspects of the machine.

Each connected radar sensor is allocated a unique ID and will transmit data for up to 8 closest objects. With a detection range of up to 60m/197' length and 16m/52' width, it provides a flexible system to meet customer-specific requirements.

- Provides object detection in CAN message format
- Independent CAN Bus may communicate with existing CAN network via CAN Gateway
- Separate CAN message & ID for each object detected (up to 8 per sensor)

ZoneSafe Control Unit

The ZoneSafe Control Unit is installed in the cab so it is clearly visible to the driver. ZoneSafe is activated when a VibraTag Driver Tag is inserted into the Control Unit prior to operating the vehicle. Audible and visual alerts indicate various alarm states including a two-stage alert for the detection of one or more tags, system errors, and the non-insertion of a driver tag. A mute button can override a detection alert once a tag has been acknowledged.

ZoneSafe Antenna

A ZoneSafe Antenna creates a detection zone around a vehicle. Up to six antennas can be installed and linked in sequence to a control unit. The detection zone for each antenna can be programmed from the smallest 3m/10' up to the largest 10m/33'.

Zonesafe® RFID Tags

ZoneSafe RFID tags can be used to detect people, protect assets, and create exclusion zones. Each tag can be uniquely identified and linked to individual people. Driver tags have the same functionality as pedestrian tags and are also compatible with the control unit.

Warning Alarms

Vital safety devices are needed to warn workers and pedestrians that a vehicle is maneuvering.

bbs-tek® white sound® are the safest alarms in the world due to their instant locatability and directional sound. The multi-frequency alarms are only heard in the danger zone, thus eliminating noise nuisance for local residents. bbs-tek® white sound® Smart alarms auto-adjust to 5dB above ambient.

Quiet Vehicle Sounder Designed for electric and hybrid-electric vehicles of all types, the Front speaker QVS Electric Vehicle Sounder warns pedestrians and other vulnerable road users that a quiet vehicle is approaching.

Single Tone Alarms meet the basic needs of reversing safety by warning pedestrians and workers that a vehicle is reversing.

Warranty Terms and Conditions

Brigade warrants all goods to be free from defect in material and workmanship in normal use provided that they have been installed and operated in accordance with the instructions supplied. Normal wear-and-tear excluded. The commencement date of all warranties is the date of delivery to the purchaser unless otherwise agreed in writing by Brigade. The period during which the warranty applies is stated above. Brigade make no other warranty, express or implied, with respect to the goods, their marketability, quality or fitness for any particular use or purpose. In particular, but without prejudice to the general provisions of the conditions of sale, no responsibility is assumed for incidental or consequential loss by reason of any warranty express or implied.
Full details of Brigade's Terms and Conditions can be found at brigade-electronics.com/terms-conditions/

Brigade Electronics Group Plc reserves the right to change terms, conditions and specifications shown in this catalogue at any time.
